

LINX

3 WAYS TO SAY YES TO MORE CONTRACT PACKAGING WORK

Contract packagers increasingly need to accommodate a variety of packaging projects within their facilities, catering for new trends such as short runs of promotional packaging, new materials, and meet quick turnaround targets.

SWITCH BETWEEN PRODUCT RUNS QUICKLY

With many brands embracing short runs of products with promotional packaging, it's important your coder can quickly switch between different messaging quickly. Linx coders use an easy to use interface, ensuring codes can be changed rapidly to keep up with production.

SUPPORT A RANGE OF SUBSTRATES

With each customer having different packaging requirements, it's important that your coder is capable of a range of different print sizes for both primary and secondary coding for use on different product lines. Choose a versatile printer like the CJ400, which can print codes from 1.1mm to 20mm

GUARANTEE QUICK TURNAROUNDS

Many contract packers get asked to meet tight deadlines which may be missed due to coders failing, lengthy maintenance and set up procedures. Linx printers are built with reliability in mind, offering minimal maintenance, quick set up and with delicate instruments sealed within protective enclosures.
